

JCS Environmental Policy

Japan Climate Systems Corporation has the following corporate philosophy: "Contributing to society and individuals through the creation of new value that will produce an abundant and comfortable automotive experience". Based on this philosophy, we strive to achieve harmony between the natural environment and all corporate activities involving the development and manufacture of car air conditioning, to contribute to the creation of a comfortable environment and the preservation of the global environment.

1. Recognize environmental aspects that involve corporate activities, products, and services, and implement continuous environmental preservation activities with an environmental management system that is in compliance with ISO14001.
2. Observe regulations, ordinances, and accepted requirements regarding the environment in order to prevent environmental pollution.
3. Set environmental goals and targets according to the environmental policy, and review these goals and targets regularly while working to conserve energy, conserve resources, recycle, reduce waste/garbage, and reduce chemical substances that place a burden on the environment.
4. Place emphasis on communication with local communities, and actively cooperate in local environmental preservation activities.
5. All employees and related personnel are to be informed about this environmental policy. Each individual's awareness of environmental preservation is to be increased, and the environmental policy will be published upon request.

It is said that global environmental preservation is the global theme for the 21st century. We take full advantage of state-of-the-art technology, along with our partners Visteon, Matsushita Electric Industrial Co., Ltd., and Mazda Motor Corporation, while continuing to provide automotive air conditioning systems that are kind to the environment.
